## An Easy-to-Use Secured Document Publishing Solution for Sharing of Sensitive Information

- What does it cost you if your competitors get to your most confidential information?
- Do you often need to share confidential information with colleagues, partners and/or suppliers?
- Are you confident that your distributors are not sharing your price list with others?
- Do you trust your manufacturers not to share your design documents?
- How do you protect your critical information from hostile employees?
- Do you have to comply with labor laws and maintain personnel files in a safe location with limited authorized access?
- Do you need an affordable, easy-to-use secured document publishing solution that seamlessly integrates into your network?

If you answer 'Yes' to any of these or similar questions, you need our **Documents 1Box™**.

## Documents 1Box™

### Provides

- Secured Publishing of Documents
- Controlled Sharing of Documents
- The Best Value for Money
- Easy-to-Use Operation
- Seamless Integration with Your Existing Networks

### Enables

- Protection against unauthorized copying, viewing, printing, modifying, or even screen-capturing of confidential documents
- New Revenue Streams
- Additional Business Opportunities

## Designed for small and medium-sized businesses

## How Documents 1Box™ Maintains Tight Control over Your Confidential Documents

**Documents 1Box™** enables businesses to maintain full control and management of publishing and sharing of documents over their IP network. Organizations can determine and enforce corporate policies as to who may view, modify and print documents by configuring the system according to company policies. Each authorized user receives an account which can be defined by listing username, password as well as the directories they are allowed to read and to which they may publish documents, if at all.

**Documents 1Box™** serves as a repository for secured documents where users can download the authorized document in encrypted format. Authorized publishers with permissions **easily navigate** directly to the desired folder and upload the documents. Documents **can be uploaded from any location** whether on the corporate LAN or remotely. Once uploaded, the publisher can provide a document description and determine document rights.

The authorized user can view and/or modify the document per the access rights using Finjan's **Vital Security™ for Documents** client component, which decrypts the document and enforces user rights. The client component is **activated by a single use installation key** containing the user specific rights and user identification.

Documents 1Box™ Functionality

# Documents 1Box™

Connect | Protect | Forget

## Product Overview

**Documents 1Box™**, specially designed for small and medium-sized businesses, is a **unique solution** providing a **secure method for sharing and publishing documents** within a company and/or to external users. The solution eliminates the risk that information will reach unauthorized parties. **Documents 1Box™** supports up to 250 users.

## Seamless and Simple Integration into Existing Networks

**Documents 1Box™** integrates seamlessly on the corporate network with no need for any change. Simply connect the **Documents 1Box™** into your corporate network and you are ready to go!

## Simple to Use

**Documents 1Box™** requires no learning curve. The solution contains Web-based management which can be accessed from anywhere on the corporate network or using remote access via a Web browser. Once you access the **Documents 1Box™**, simply browse the directories using an intuitive graphical user interface (GUI). Within the repository, documents are presented using familiar tools such as Microsoft® Internet Explorer or Adobe® Acrobat®. Additionally, permissions and restrictions implemented using **Documents 1Box™** are transparent to the user unless attempting to perform an unauthorized action.

## User Access Rights Mechanism

**Documents 1Box™** includes enhanced user rights management to enforce security policies. A manager can define user rights which can consist of viewing, editing, saving, forwarding, copying/pasting, screen-capturing, modifying or any combination.

## Reliable Printing and Watermarking

**Documents 1Box™** provides the publisher of the document **full control** over printing authorization by indicating whether or not there is permission to print. Even when printing is allowed, the documents are printed by pre-designated secure printers. The documents printed contain a visible watermark denoting the username, IP address and date/time of printing in order to track hard copies of the document. Since the **Documents 1Box™** solution prints directly to the printer without having the data stream pass through the user's computer, printed documents cannot be captured by users redirecting their printer output to a file.

## Secures Revenues and Increases New Business Opportunities

**Documents 1Box™** secures revenues by protecting confidential information from reaching competitors transferred by either employees or individuals external to the organization. Organizations can feel confident that their financial or strategic information can be accurately tracked and protected. **Documents 1Box™** ensures that e-business documents are distributed to **authorized customers only**. For example, organizations that perform market studies and provide them electronically to customers can be certain that their documents will not be transferred to an unauthorized party who may be a potential customer or competitor.
